How do I set up community guidelines for Conversations?

Community guidelines can help students understand their expected behavior while interacting in the Conversations tool within a course.

Instructors can select the **Settings** option in the upper-right hand corner; a gear icon accompanies the text, which is next to the **Create new** topic button.

Under **General Settings**, you'll see the **Community Guidelines** section, with an **Edit Guidelines** button below it. Select Edit Guidelines, add your new content in the text box, and select **Save**.

Students will see the Community Guidelines when they initially enter Conversations, and will be unable to participate in the discussion until they select **Agree**.
