

# How does bookmarking work in Conversations?

## How can I bookmark a topic in Conversations?

In Conversations, all users have the ability to **bookmark** topics they wish to track. Using the Conversations left-hand topics list, users can filter posts to display only those they have bookmarked. This is a separate feature from **pinning**, which allows instructors to pin individual topics to the top of the Conversations left-hand navigation menu.

You will be able to bookmark any topic once it has been published. When you select a topic in the left-hand list, the post and its comments will appear in the right-hand display column. Below the text of the initial post, you will see the option to **Bookmark** a topic, alongside a star icon. Click **Bookmark**.

Bookmarked posts will have a star icon appear on the right of every topic preview in the left-hand list. To easily find your bookmarked topics, use the **Filter** option above the left-hand topics list. In the Filter drop-down menu, select **filter: bookmarked** to show only the topics you have bookmarked.

## How can I unbookmark a topic?

Select the topic whose bookmark you wish to remove from the left-hand topics list. The post and its comments will appear in the right-hand display column. Below the text of the initial post, you will see the option to **Unbookmark** a topic, alongside a star icon. Select **Unbookmark**. The star icon will disappear from the topic preview in the left-hand topics list, and the topic will no longer appear when you filter bookmarked posts.

**Note:** *You cannot bookmark individual posts or comments, only the whole topic.*
