

How may I customize my presence in Conversations?

In Conversations, users will have a limited profile that displays alongside posts they create. This includes their Sakai-provided display name and a profile image as it appears in Sakai's **Profile tool**. You can adjust certain information within the Profile tool, for more information please see [Profile tool documentation](#).

Users with the instructor permission enabled in Sakai will have the role of **Instructor** displayed next to their name when they answer questions. This allows participants to easily distinguish the **Instructor's Answer**, which is also highlighted with a light green background
